Besides the big hug we received after he opened the present, he immediately started folding papers to create the airplanes. The book includes many colorful decorative sheets for airplanes, more than I expected, and the airplanes flew easily across the room. My nephew didn't seem to have any trouble folding the planes. He was able to construct all of them by himself.0 of 0 people found the following review helpful. This is a really cool book. But overall a great product that has the potential to yield really cool paper airplanes.0 of 0 people found the following review helpful. He just loves the instructions and being able to make all different
