Alex Clark : Small-Scale Armour Modelling (Modelling Masterclass) before purchasing it in order to gage whether or not it would be worth my time, and all praised Small-Scale Armour Modelling (Modelling Masterclass):

Like many modellers I prefer to paint my kits first with acrylics, then moving on to detail and weather them with artist's oil paints. You won't find that approach in this beautifully laid-out and functional book. As far as painting goes, this is pretty much an all Humbrol enamel shop; airbrushed base, highlights and weathering. Ok, that out of the way, Small Scale Armour Modelling is a book filled with useful information that continues to find its way into my repertoire. This is one of the 'masterclass' series, and Alex Clark has more than a few useful tricks up his sleeve to share with us. What really stands out is the presentation, the photographs and the binding. These make-up a book that really should come right to the bench with us as we hone our skills or try out something new. If I had known about the 'all enamel approach' to the painting section before buying, I might not have bought this book. However, I am still very happy to have it on my shelf as its content, and especially its format, easily stands up to any of the other big books beside it. 4 of 4 people found the following review

helpful. A Big Pride after PrejudiceBy Ricardo HaddadIt took me a lot to decide whether to buy or not this book, because I mainly model 1/72 WWI and WWII armor. I initially thought that it would be a nice book on pair with previous Alex Clark's books (Modelling Panzer IV 1/72 and Modelling Tiger Tank 1/72, both highly recommended), but only directed for modelrn armour. However, after taking a glance at a friend's book, I immediately bought at , because it is a complete handbook on many techniques that will help any modeller with 1/72 scale armor and even other scales. High class and easily to handle, on a "notebook" format. Excellent.2 of 2 people found the following review helpful. Very helpful for all modelers, pure Alex ClarkBy Bill PowersThis is not a combining of old Osprey articles but a well written and illustrated how to book. There are some photos from the Osprey series and a little duplication, but most is new and useful. My modeling friend read mine and immediately bought his own!Fabulous buy at 's price.

Since the mid-1990s, small-scale armour modelling has seen a great resurgence in popularity. This is largely due to major injection-moulded kit manufacturers such as Revell of Germany and, a few years later, Dragon Models Ltd entering the market for 1/72-scale armour models. Alongside this, numerous aftermarket manufacturers have also turned their attention to this scale and many types of accessories that were previously associated only with larger scale models are now available and commonplace for those in 1/72 scale. The popularity of this scale is also borne out by regular new releases and the continuing appearance of new aftermarket manufacturers. Reference and reading materials pertinent to this scale have also kept pace with these developments. Virtually all of the major modelling magazines feature small scale modelling articles, news and kit reviews. For a number of years there has been a successful, glossy, small-scale only magazine called Minitracks. On the Internet, there are numerous websites dedicated to small-scale modelling. Many of the most popular modelling sites, such as Missing-Links, have successful small scale forums and discussion groups. This book will cover all of the major aspects of small-scale armour modelling and will give an insight into Mr. Clark's approach to construction, painting, finishing and presentation.

...does an admirable job of explaining many of the techniques modelers are interested in. Tim Kidwell, Model Retailer (October 2011)About the AuthorAlex Clark was born in 1972. He spent his early years building model aircraft but switched to 1/72nd-scale armour in 1989. After completing a degree and Phd in chemistry, he began work as a computer programmer for a scientific software company, his current profession. He is married and has two young sons. This is his second title for Osprey Publishing, the first being Modelling the Panzer IV in 1/72nd Scale.
