Tins handbook, which explains in detail a variety of processes common to general metal working, has been written by a number of thoroughly practical men, by whom it was contributed in another form toW ork, the illustrated weekly journal of handicrafts and mechanics. I ts appeal is to everybody who makes any attempt at working in metals,

inasmuch as at least one of the processes soldering, brazing or welding will be met at a very early stage in the beginners experience. This handbook will be found a complete workshop guide to the usual methods of soldering and brazing, but merely an introduction to tilit fusion or autogenous welding processes, the most important oi which is the subject of a companion 11 Work Handbook entitled Oxy-acetylene Welding. If readers encounter difficulty in any of the matters treated in this book, they have only to write Work, in whose columns (but not by post) will be willingly allorded. B. E.
